

Lap Sack

Improved Wheelchair Storage

The Lap Sack is a knapsack redesigned for wheelchairs. The Lap Sack is intended as an improvement on wheelchair back packs, which rest on the back of the wheelchair and are difficult for the user to access.

The Lap Sack has storage directly in front of the user, for quick access to their belongings.

The Lap Sack has a handle on it's top surface. The handle is for quickly removing the pack, so that the user can quickly dismount from their chair.

The Lap Sack mounts onto a clamp, attached to the seat of the wheelchair. The clamp keeps the weight of the pack off the legs of the user, which may be atrophied.
